

DIY 4

Nov 26 2023

1 . Vowel or Consonant Identifier:

Write a program that takes a single character as input and determines whether it is a vowel or a consonant.

2 . Even or Odd Checker:

Write a program that takes an integer input from the user and prints whether it's even or odd.

3 . Age Classifier:

Write a program that takes a person's age as input and prints whether they are a child, teenager, adult, or senior.

Everything is focus on if condition

Basic example of if condition

```
# 10 thousand
a=input("enter the number")

if(int(a)==1000):
    print("This is Thousand")
elif(int(a)==2000):
    print("This is Two Thousand")
else:
    print("Unknown Input")
```

use this as example

and study the **datatypeBasic.pdf** i will ask question in next class

Thank You
