DIY 7

Feb 15 2024

1 . **Print the name first and then print it by character using two loop like given below**
2 . **Loop the name reverse using for loop or any loop**
3 . **Print the even number only in this list using for loop and if condition to filter**
     list_of_number=[2,3,5,1,3,7,2,6,8,2,3,4,44,23]
4 . **Print the odd number only in this list using for loop and if condition to filter**
     list_of_number=[22,33,55,11,22,33,44,55,66,10,4,3,8]

Everything is focus on if condition and for loop

Basic example

```python
a=["python","java","angular","css","html"]
for i in a:      # i = java
        print(i) # java
        for j in i:  #java first is j     nested loop
              print(j)
```

use this as example

Thank You
